Type comments in the box at the bottom of this form.

Amount herbicide used in milliliters

Time worked, in minutes

Mark locations where invasive plant were treated

Open a second form if more than one plant species was treated.

Comments

Sprayed glossy buckthorn that whose stems were pencil size and smaller. Used yogurt cup on the end of sprayer to control spray. No trees had seeds. Also sprayed asian bittersweet when I came across it. Used 1.5 gallons of 5% glyphosate, 5% triclopyr with 0.5% cygnnet surfactant. This combination has not been tried on our glossy buckthorn or asian bittersweet. It is getting late in the season so it may not be as effective as earlier in the season.
